**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 13, 2007 has been entered.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
- The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1, 4, 5, 7, 9 & 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In Claims 1 & 7, the claims as presently amended are unclear and confusing since it is not known how the "plurality of formations" define a retaining slot and yet comprise a plurality of ribs that extend into the slot. It appears that other elements need to be established [as noted in the previous Final office action] in order to clarify the scope of the limitation since a rib can be included as one of the "plurality of formations". In Claims 4 & 9, the phrase "said lip" does not have a proper antecedent basis. Consequently, the remaining claims are rejected since they are dependent upon an indefinite claim.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 4, 5, 7, 9 & 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sulcek [U.S. Patent No. 4,478,465] in view of Vogler [U.S. Patent No. 5,625,969]. Sulcek (figures 1-4) teaches of an “escutcheon” for an appliance door assembly, the escutcheon comprising: a front edge and a rear edge horizontally spaced from the front edge, the front and rear edges vertically depending from an escutcheon upper surface; a control panel mounting portion comprising a mounting surface and a lower edge, the control panel mounting portion extending upwardly and inwardly from the lower edge and between the front and rear edges, the control panel mounting portion including a plurality of inherent openings there through; and a plurality of formations downwardly from the lower edge defining a retaining slot configured to receive a panel, the formations comprising a lip and a flange spaced from the lip to define the retaining slot, the flange extending at an acute angle with respect to the lip, the retaining slot configured to receive an upper edge of the panel on the appliance [see Exhibit C – previously submitted with the last Final office action]. The position is taken that Sulcek teaches the claimed limitations in the same manner that applicant discloses, as best understood, in view of the disclosure as originally filed wherein the formation(s) consists of a continuous lip (228) with a flange/guide surface (230) forming a slot (232). Sulcek does not show the incorporation of positioning ribs

extending into the retaining slot. Vogler (figures 1-5) is cited as an evidence reference to show that it was known in the panel securing art to utilize positioning ribs (R) within a retaining slot (fig. 3) for the purpose of securing a panel (P) within the slot. Accordingly, the position is taken that it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the device of Sulcek so as to incorporate positioning ribs as taught by Vogler because this arrangement would provide Sulcek with a means to insure a tight secure engagement of the upper margin of the plate within the retaining slot [note Vogler – col. 5 lines 15-27].

#### ***Response to Arguments***

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
